

by tapping the Stacks symbol, and after that 'Embed.' Looking at the upper right corner, you will see a three vertical spot symbol. Tapping this opens up access to a few different alternatives which incorporate; Undo, Revert, Share..., Open in..., Help and Feedback, Settings and Details and Cancel. These are practically simple.

Now let's move on to the actual editing. Editing Tools are an incredible method to address a picture in case you're not content with the general look of a picture. In Snapseed, you can play around with numerous tools. Here, instruments like Heal, Glamor Glow, Curve, are notwithstanding conventional devices like Tune, Crop, Perspective, and so forth. In comparison, Pic'sArt Tools division is a smidgen unique and somewhat constrained. You'll locate the original editing instruments like Crop, Shape Resize, Point of view, and so on. Although it has a couple of supportive tools like Shape Crop, Curve Motion, and Dispersion, yet they some way or another could not hope to compare to Snapseed advanced tools.

Tuning The Image

Tune Image will doubtlessly be the first stop when you begin working with a photograph. This enables you to separately change Brightness, Contrast, Ambiance, Saturation, Shadows, Highlights and Warmth settings. You can Auto-Correct the photograph by setting levels. Levels can be set by tapping the symbol to one side of the current chosen setting and dragging to either top or bottom of the screen. Tapping the Comparison-viewing symbol in the upper right will enable you to view the edited photo with respect to the actual One.

- **Brightness:** Darken or light up the whole picture. You might need to change the brightness of the photograph so as to modify the mid-tones. Sometimes, the measure of light in the photograph is flawless, however, you might need to light up the photograph a tad – this is the point at
