

Even from a macro-perspective, it's important to use the right radial mask to allow for localised editing. That's because certain parts are going to need localised editing. You're going to be compensating for the lacking elements in the picture which is why you need to evoke advanced tools for vintage restoration. Colour correction is key as well. You may have to review the time zone and understand what dominant colours were being used. If the buildings were all shades of mahogany and brick red, then that colour needs to be used. If men wore blue shirts and brown pants, then that's another consideration that needs to be taken into account.

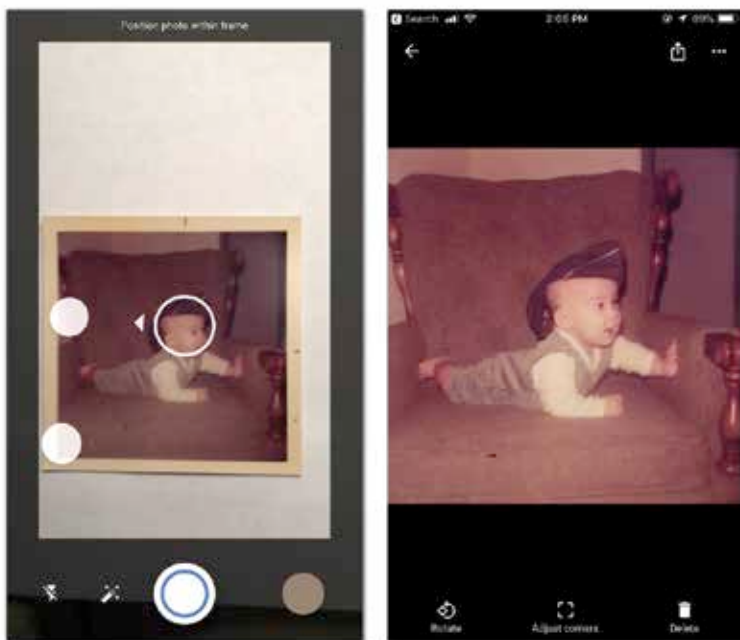

Photo restoration on mobile

As a designer, you're telling a coherent story with your vintage restoration process. The final image should speak about the time of the photo and bring it to natural life. You should dig deep into the image to find for noise, dust, and blemishes that you can remove using the editing tools provided. For the vintage restoration process, the clone and healing tools are going to be extensively used. **d**
