

that you're working in. You can also create more complex algorithms that can impact your specific area of expertise.

Unpacking new updates in 2019

While there are new changes in Excel in 2019, it's important to unpack the same appropriately. It's important to understand the nuances and similarities in older versions and review the impact on the final project. From a resource perspective, Excel 2019 should be viewed as how it can add value to your professional life.

There are new interfaces, UI and applications under the professional version. Users must review all the changes that affect their day-to-day professional use and review long-term changes as well. This will help in refining your skills better and creating a larger impact on the work you're doing.

Excel across devices in 2019

Unpacking the new updates should be done systematically and methodically. You should work your way through these changes one by one and understand where you need to update your skill set.

New Functions and Charts

As a regular part of the new Excel rollout, new functions and charts are being added to the listing. Here they are –

CONCAT

The new function of CONCAT is similar to CONCATENATE but is easier to
