

Referencing

Referencing allows you to take your skillset to the maximum. You can start making advanced level changes and formulations based on your learnings.

Referencing is an important subject area to explore when working with Excel. You can reference within a cell and outside of it to understand the dynamics of the relationship. You can also design different worksheets that reference key parameters within each other. You can create a more impactful Excel workflow when you use referencing correctly.

Referencing is a key skill area that gives you dynamic reach within the Excel domain. You can create new functions, design better workflows and optimise data sets to make meaningful conclusions. From tax rate determination to complex financial modelling, referencing is key.
