Summary sheet

Consolidating Excel sheets together

ences while using Excel templates. There are also advantages to having a uniform approach as it creates a more branded system.

Templates are also critical and come into play when you have different data sets that you want to present cohesively. Portability is the greatest advantage when it comes to designing new templates. You need to have a design-friendly environment built-into the system. You can change the default layout as needed, or even create a new one based off the simple versions available.

When using various templates to demonstrate key information, using the right formatting is important. Templates can be applied universally or sheet-specifically depending on your needs. You can install a new template or manage existing ones by going to the File section and then visiting My Templates.

What is conditional formatting?

Conditional formatting is a great way to demonstrate data filtering visually.
