

also create a more complex domain of filtering, sorting and searching when you can leverage the power of Excel to its maximum potential.

What are advanced formulae in Excel?

Advanced formulae are special functions that you can perform on Excel that will give you additional capabilities in terms of functionality and form. It's unlocking the other 80% of Excel's capabilities as a powerhouse of information analysis. You can perform a highly complex set of operations and keep the data proprietary when you use your local spreadsheets.

The image shows the 'Conditional Formatting Rules Manager' dialog box in Excel. The 'Show formatting rules for:' dropdown is set to 'This Table'. There are three buttons: 'New Rule...', 'Edit Rule...', and 'Delete Rule...'. Below these, there are four columns: 'Rule (applied in order shown)', 'Format', 'Applies to', and 'Stop If True'. The first rule is highlighted with a red box: 'Formula: =C2>0', 'Format: AaBbCcYyZz', and 'Applies to: =A\$2:\$A\$8'. Below the dialog box, a green arrow points down to a table in a spreadsheet. The table has five columns: 'Product', 'Sold', 'In Stock', 'Delivery', and 'Sales, USD'. The rows are 'Product 1' through 'Product 7'. The 'Sold' column has values 14, 6, 17, 11, 16, 7, 14. The 'In Stock' column has values 0, 2, 0, 10, 0, 19, 1. The 'Delivery' column has values 'USA', 'Worldwid', 'USA', 'USA', 'Worldwid', 'Worldwid', 'USA'. The 'Sales, USD' column has values \$12,265, \$4,385, \$14,879, \$7,673, \$8,702, \$2,041, \$10,279. The rows are color-coded: Product 1 (yellow), Product 2 (orange), Product 3 (yellow), Product 4 (orange), Product 5 (yellow), Product 6 (orange), Product 7 (yellow).

Product	Sold	In Stock	Delivery	Sales, USD
Product 1	14	0	USA	\$12,265
Product 2	6	2	Worldwid	\$4,385
Product 3	17	0	USA	\$14,879
Product 4	11	10	USA	\$7,673
Product 5	16	0	Worldwid	\$8,702
Product 6	7	19	Worldwid	\$2,041
Product 7	14	1	USA	\$10,279

Example of Conditional Function

As a company grows in scale, so too does its need to have more control over information. Advanced formulae give you that control from the ground up. These also give you insight and experience.

Conditional functions

A conditional function is a unique advanced formula that gives you the answer based on certain parameters that you've set in place. It gives you a variety of options to select from in terms of IF, SUMIF, ERROR, etc.
