Use of LEN function

You can even check the validity of cells by the length of the string. If you find that a certain format is not being followed or the dates might be wrong in your millions of data points, you can run a simple LEN test and get answers easily.

What about LEFT, RIGHT and MID?

The LEFT tool allows you to search for specific inputs from the left. You can even count spaces by starting at a different point. It helps you capture the

LEFT, MID, RIGHT in action
