

A reference chart used to display critical information

Formatting parts of the chart

You can click on the edit section to understand the plethora of changes that you can perform on the chart. To format the chart, you can follow the steps that have been mentioned below.

Go to Format and then click on Chart Element. You can then see the Format pane appearing, from where you can tailor your chart to look better.

You can also format the axis by right-clicking on the chart and visiting the bottom-most option. You can then move or resize the panel to work within the parameters set up. Here are some common changes that you can perform.

Shape Fill

Shape Fill is a great tool to colour up an element or the entire image completely. You can highlight specific parts of the chart or work on certain domains that are best represented within the chart itself.

Shape Outline

The outline tool is used when you want to highlight a particular component of the image or chart. You can determine the appropriate weight, size and dimension of the outline. This can help you put the appropriate amount of focus on a specific aspect of the chart.
