

Shape Effects

Shape effects can be used to add an effect to the shape being worked on. You can add bevels, shadows or 3D effects on the chart or the element. You can use it to make a certain component pop-out for attention.

Shape Styles

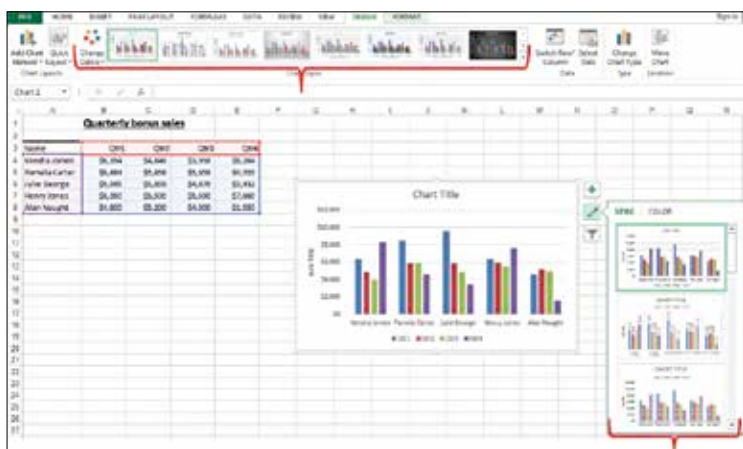

Shape styles allow you to form universal template level changes on the chart. You can have more colours introduced into the chart by adding shape styles into the mix. You can perform complex design iterations by using the standard formatting options available.

Changing the format of the text

This can be done by visiting the Home tab and then going to Font. You can then change the font styles from there directly. This is exceptionally helpful in the case where the text size isn't compliant with the overall design of the chart.

WordArt's extensive lineup

For a truly multifaceted graphical experience, users can also leverage WordArt and its extensive line-up of features. You can create bold text that has inherent 3D effects and unique colours. You can go to the FORMAT tab and then click on WordArt styles to find the best option.
