

methods. We then help you with visually making sense of large data sets with the help of a little formatting and charts. And if the basic formulae don't interest you, then perhaps the more complex ones should be worth a read. We then proceed to devoting an entire chapter towards Pivot Tables, one of the most important features in spreadsheets and also one of the most sought after skills on a resume. This is followed by a chapter that's all about coding macros to automate processes. We end the FastTrack with a chapter dedicated to troubleshooting an Excel document. If you've ever gone about making elaborate worksheets with interlinked formulae then you know how easy it is to set off a cascading set of errors, so we're going to help you resolve such issues.

As always, we're open to your feedback and suggestions towards what should be featured in the next FastTrack. All you need to do is write to us on editor@digit.in
