

You can design new data maps, create new correlations and perform your research on company data. You can uncover insights that are only evident to you after you've performed VBA.

As VBA is a highly technical skill, you're able to get closer to becoming a coder and master at Excel. You can use these skills across various industries and projects. You can now communicate with DevOps teams and purely technical coders and be the bridge of communication between them.

You can now also create a more value-oriented centre within the data domain. As data continues to evolve, you're able to create a significant impact using advanced macros and complex applications. You can also install Excel add-ons to make your coding journey that much more empowered when using VBA.
