

What you get when you close Splash screen. Coloured boxes are for instructive purposes

it again by clicking the '+' or by pressing 'T' we can toggle the Tool Shelf panel.

The other panel on the right is the Viewport Properties panel. We can expand it clicking the '+' sign on the right hand side and collapse it by dragging it to the edge. It contains important properties like the location.

Navigation

Navigational controls are mostly dealt with the middle button of a three button mouse and the number pad by default. Don't worry if you are working on a trackpad, we'll show you a workaround. The primary ways to change your view are :

- **To rotate/orbit your view:** hold the middle mouse button and drag around.
- **To zoom in your view:** use the mouse scroll wheel up or '+' in the NumPad.
- **To zoom out your view:** use the mouse scroll wheel down or '-' in the NumPad.
- **To pan up and down:** hold down Shift and use the mouse scroll wheel
- **To pan right and left:** hold down Control and use the mouse scroll wheel
- **To go to top/bottom view:** '7' (in the NumPad) for top and 'Ctrl+7' for bottom.
- **To go to front/back view:** '1' (in the NumPad) for front and 'Ctrl+1' for back.
- **To go to left/right view:** '3' (in the NumPad) for right and 'Ctrl+3' for left.
