

How to emulate a mouse and the numpad if you have neither

Search

The Search function allows you to find anything in Blender without needing to know where it's at. To enable the Search function tap the spacebar while placing your mouse on the 3D Viewport. Then you can type in the function to want to search and select it from the dropdown menu. It will also show you the hotkey associated with the function.

Screens

Screens are predefined window layouts. Blender is very flexible with your working environment. It lets you create customized environments for different tasks. Switching between environments within a file is often very useful while creating complex projects. You can select the layouts in the Screen data-block menu which is located in the Info Editors header.

Controls

Add +

On clicking the Add button and a new frame layout is created based on the current layout.

Delete X

The selected screen can be deleted using the Delete button.

Shortcuts

Use Ctrl-Right and Ctrl-Left to cycle between screens. The default screens available are shown in a table ahead.
