

the area. It can be used to split or combine areas. The cursor changes to a cross (+) when you hover over it.

To split the area, left click on the split widget and drag it inwards. The extent you drag will determine the split size.

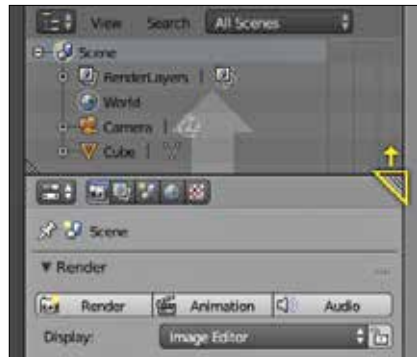

Area split widget

Area Join Widget

To join two areas, left click on the split widget and drag it outwards. To combine two areas they must have a common edge.

Release the left mouse button to finish the join. If you press Esc or the right mouse button before releasing the join will be cancelled.

The Outliner is being merged over by the Properties Editor

Swapping Contents

To swap the contents of two areas you can press the Ctrl+Left Mouse Button and drag the current area with the target area. The two areas must be inside the same window but not necessarily side by side.

Toggle Maximize Area

The whole application window is filled by the Maximize Area. It contains the Info Editor and the area selected. To maximize an area, you can select the Maximize Area menu entry in the View on the header section. To toggle back use Right Mouse Button on the editors header and select Tiled Area. The Back to Previous button in the Info Editor header on the right also returns to tiled areas.

Shortcuts: Ctrl-Down or Ctrl-Up, Shift-Spacebar to toggle between normal and maximized areas.

Toggle Fullscreen Area

Only the main region is visible in the fullscreen area. The shortcut can be
