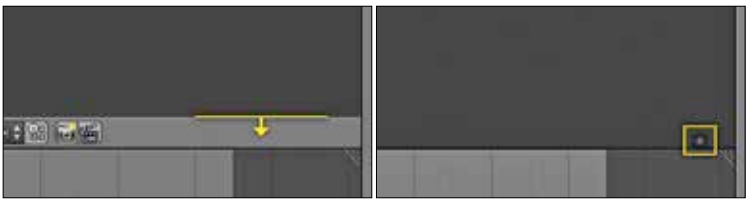
Changing the Size and Hiding

You can resize regions the same way as areas. Drag the borders till you get the appropriate size. You can hide the by dragging it end to end and making it disappear. You can make it reappear by clicking the small plus sign as seen in the picture. The Properties and Tool Shelf region have hotkeys (N and T respectively) to toggle.



Changing the size and hiding

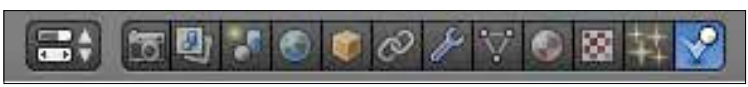
Position

Press F5 to flip a region to the opposite end. The active region is will be flipped. Another way to flip a region is to Right click on the region, and select the corresponding option from the menu. If the header is at the bottom, the option will read Flip to Top, and vice versa.

Tabs & Panels

Tabs

Tabs are overlapping sections in the user interface. The Tabs can be horizontal or vertical.



Horizontal tab header.

Switching/Cycling

You can switch vertical tabs by scrolling using the Mouse Wheel while the cursor is on the tabs or with Ctrl + Scroll from anywhere in the region. You can also cycling through tabs with the usual Ctrl+Tab and Shift+Ctrl+Tab.

Panels

Panels are the smallest unit in the UI. Panels can be collapsed and expanded to hide/show their content. They are used in the almost all regions of Blender.

In the image ahead, there are three panels: Transform, Edit and History.
