

### 3) Texture Type

You can choose between built-in texture generators or select an image or movie.

### 4) Mapping

This is used to control how the texture is mapped onto the object. Mapping used to be set to “Generated”, but has been changed in the recent updates to “UV”.

### 5) Influence

Settings which control appearances like brightness, transparency, glossiness and roughness. These are also affected by the material setting. Many textures use a secondary colour in their generation. That is also controlled in this panel.

The basic texture generators are functional, but not exhaustive. Most of the time you need textures like grass, brick, metal and such into your model. If you want to put a picture of your face on an object, you can do that.

Movie files can also be placed on an object as a material. To use an image as a texture, add material as before, go to the texture buttons and select “Image or movie” option under “Type”. When you select this, these are the options you would see:
