

DIY - Your First Render

Buckle up to create your very first render in blender.

Now that you know what Blender can do, let's take a look at how you can do it. By the end of this chapter, we shall obtain a photorealistic render of an apple. The steps mentioned in this chapter are common methods of going about creating a render from scratch and can be used to make almost all kinds of renders that you can make on Blender.

Setting up the scene

To make a new Blender file, run Blender and click away from the splash screen. You'll be greeted in Blender with the default cube in the centre of the screen, a lamp and a camera.
