

Texturing

Texturing is this single step that can be the difference between an okay render and a fantastic render.

You can download textures for free or for a price online. The textures used in the examples were downloaded just from a Google search for “apple textures” and “stem textures”.

Begin texturing by changing the rendering engine from Blender Render to Cycles Render from the menu on the top of the screen. Now, from the Material tab on the right side of the screen, select Use Nodes from the Surface Panel. Then, change the UV/Image Editor window to to

Texturing configuration

the Node Editor window. You will see that Blender has already made a node setup for you. Hit ‘Shift+A’ to add more nodes and click and drag with the left mouse button to make connections. Use the node setup shown in the image and fiddle with the values of the properties to achieve the result you want. If the texture you have has a normal map, then plug the Color output of the normal map image to the Color input of the Normal Map node. But, if the texture you have has a height map, then plug the Color output of the height map image to the Height input instead of the Height input of the Bump map node. If you don’t have the normal map or height map of the colour image, you can either look for a similar texture which does come with a normal map, or you may convert
