

landing a job in the 3D modelling industry without spending a bomb on expensive certification courses for proprietary software.

With this FastTrack, we've focused on not only focusing on getting the theoretical concepts across but we've also included two DIY chapters so that you can get a more hands-on learning experience. We've also included a separate chapter on what kind of hardware would be helpful in speeding up your renders should you be convinced to invest in a better PC.

Blender is like the Linux of 3D modelling software, so you really cannot learn Blender by just going through the conceptual chapters, you need to familiarise yourself with the shortcut keys and you need to try out some of the projects yourself to truly understand what's going on. Hopefully, you'll get a grasp of 3D modelling concepts with this FastTrack and help you get started on your journey towards a new career path. And if you do ever get your name featured in the credit roll of any movie, do drop us a line on editor@digit.in.
