

A 3D cursor indicates the place where new objects will be placed. It is recommended that the 3D should be located at the origin. To do that choose Object > Snap > Cursor to Centre.

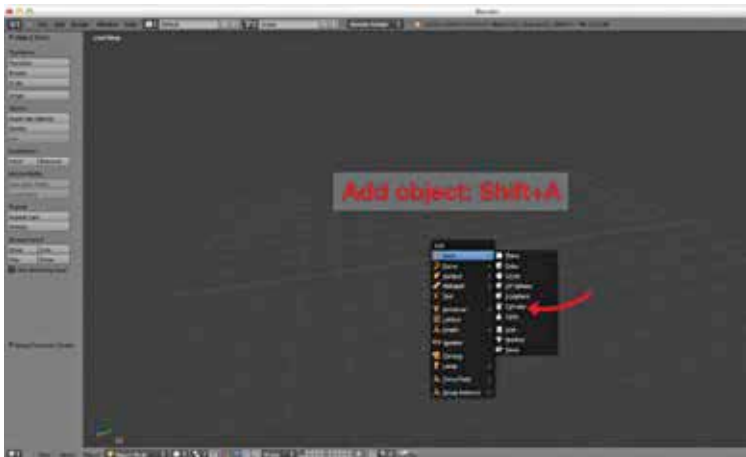

Adding Objects

With the 3D cursor at the origin, press Shift+A to display the pull up the “Add” menu. Select Mesh, and you’ll see a list of various shapes that you can insert.

Select the Cylinder shape.

Immediately reach for the left-hand panel and check which all options are available to edit your shape. Modify the following properties in the same panel:

- Vertices: 10
- Radius: 1.5
- Depth: 3
- Cap Fill Type: Triangle Fan

Add an object

Transforming Objects

Moving, scaling and rotating of the object is possible in the Object mode. You will be frequently using these to achieve the desired results. There are three ways to go about doing this, the shortcut keys, the transform handles and the transform panel.
