

In this FastTrack, we're exploring the different models you can implement using Keras and then get into the basic process involved in developing an AI model using Keras. We then get into a detailed tutorial for building a simple image classifier using Keras. By the end of this FastTrack, we hope that you will have developed an understanding of how Keras works and you'll definitely have an image classifier built. We'd ask you to switch out the underlying library and try to obtain performance metrics as to which library performs the best on your system.

Up next is the June Anniversary issue, so if you have any suggestions as to what you want us to give, then do write in to us at editor@digit.in and mention which topics interest you the most. You never know, the next FastTrack might be exactly what you wished for!
