

in models in Keras – the sequential model and the model with functional API. Moreover, it lists the steps to install Keras using pip and gives the link of various support groups such as the Keras Google group and Keras Slack channel. To learn more about the models the following resources are helpful:

1. Getting started with the Sequential model: This can be accessed at <https://Keras.io/getting-started/sequential-model-guide/>. This is an apt description of the sequential models in Keras. Further, it gives insights on how to input the data and compile and train the model. It also gives various examples to enhance the learning experience.
2. Getting started with the functional API: This can be accessed here: <https://Keras.io/getting-started/functional-api-guide/>. This tutorial explains the various complexities of the models with functional API like the concept of shared layers using various examples of different classes of well-known models.

The final and most practical official starter resource for beginners is the Keras Frequently Asked Questions at <https://keras.io/getting-started/faq/>. They cover questions and answers of broad domains covering aspects such as the need to cite Keras, how to boost performance of Keras, along with solutions to many run time problems. The best part is that all the questions are answered using examples that further enhances user readability.

Tutorials:

Following is a list of some high quality open sourced tutorials that help in evolving the understanding of deep learning in general and Keras in particular:

1. For a quick start to deep learning using Keras and scikit learn, use this: <https://github.com/fastforwardlabs/keras-bello-world/blob/master/kerasbel-loworld.ipynb>. It works on the famous Iris dataset.
2. <https://blog.keras.io/building-powerful-image-classification-models-using-very-little-data.html>: This link directs to a blog that enables you to build powerful image classification models using very little data in Keras.
3. <https://blog.keras.io/building-autoencoders-in-Keras.html>: This blog explains about auto encoders and how to build them in Keras. It also explains about their utility and uses screenshots of code while explaining it.
4. <http://www.developintelligence.com/blog/2017/06/practical-neural-networks-keras-classifying-yelp-reviews/>: This blog shows basic classification in Keras and explains how to set up a GPU instance on Amazon Web Services.
