

5. <http://machinelearningmastery.com/understanding-stateful-lstm-recurrent-neural-networks-python-keras/>: This tutorial is helpful in Understanding stateful Long Short Term Models (LSTM) Recurrent Neural Networks in Python using Keras. They are used in natural language processing.

Books on Deep Learning with Keras:

Some of the commonly used books are as follows:

1. Deep Learning with Python by François Chollet:

This is one of the most famous books written by the google AI researcher and the creator of Keras! This book builds your deep learning concepts through intuitive explanations and practical examples using Keras. It covers applications of Deep learning in computer vision, natural language processing, and generative models giving hands on skills.

It has two parts - Fundamentals of Deep Learning and Deep Learning in Practice. The first part deals with intro-

duction to deep learning, mathematical foundations of neural networks, and the fundamentals of machine learning. Part 2 deals with deep learning applications in computer vision, text and sequences processing, and generative models. It also enlists some of the best practises in deep learning.

2. Deep Learning with Keras: Implementing deep learning models and neural networks with the power of Python by Antonio Gulli and Sujit Pal:

This book implements various deep-learning algorithms such as the supervised and the unsupervised algorithms in Keras. It also examines how Reinforcement Learning and its applications can be used in Artificial Intelligence based game playing.

This book is a hand on guide to increase efficiency of algorithms by optimizing step by step functions on a large neural network using the Backpropagation Algorithm and fine tuning a neural network. It also
