

Hacking a PC

Hacking a PC is means of working a way around a computer system to gain unauthorized access to its data or take advantage of it. Hacking here does not just mean, being able to break the password to gain access to it. It can also involve elements that go deeper like figuring out techniques that bypass the authentication of the system and hacking computer databases and software programmes etc.

This article explores multiple methods to do the same with Gaining access to a local PC by BIOS passwords, using third-party software for gaining access. Veiling and bypassing an anti-virus system and other multiple methods have been discussed in thorough detail here.

Gaining access to a local PC secured by BIOS passwords

BIOS stands for Basic Input Output System and is a type of non-volatile firmware stored on a chip on the motherboard. It comes pre-installed by the manufacturer and is the first program that runs when we start the computer. It performs hardware initialisation and performs the flow of
