Gaining access to a local PC secured by OS passwords.

This can be done using various methods. Some of them are listed below:

1. Dictionary Attack

It is a method of hacking into a password protected computer by trying each word in a dictionary as a password. This method works because most users use ordinary dictionary words as their passwords, but this method will fail if any word other than the dictionary words is used.

2. Brute force attack

Brute force attack is a trial and error method that uses a code to gen-
