

3. Footprint L2, that is the machine for a moderate amount of information gathering.
4. Footprint L3 that is the machine used for the most intense and complete information gathering. Footprint L3 is also the most time-consuming machine, although it gives complete Information about the entity.

Choosing a machine

Step 2: Choose the target

After choosing the type of machine for our footprinting based on the data that we intend to gather, our next task is to choose a target company or organization. For instance, in the previous example of email spoofing, we chose SpaceX. After choosing the target, click on “Finish”. Maltego will now do its intended work.

Step 3: Results

Finally, after choosing the type of machine and target, Maltego begins to gather Information on the specified target domain, and For instance, in the screenshot attached below, we see that Maltego has collected the email addresses of the employees of the given domain name, while it collects the name servers and mail servers. Finally, when
