

Website Hacking

As the internet continues to grow at a fast pace, both public and private businesses have started taking advantage of it and moved their data to the internet. The data ranges from personal details to credit card details to even intellectual property. The internet has become one of the most used platforms for businesses and people to perform their online transactions. Every day, almost millions of dollars' worth transactions and data are exchanged over the internet.

The more lucrative the internet becomes, the more the chances are for it to become a hacking ground for attacks by cybercriminals. Cybercriminals are programmers who break a computer network and tries to access the information without authorization. They attack the business network and websites to steal the business data to either share it over the public internet
