

d. Droopescan

Droopescan is a plug-in-based scanner to help ethical hackers to identify specific issues with Drupal CMS. Droopescan can also be used on CMS like WordPress, Joomla, Moodle, and SilverStripe. Droopescan runs based on Python coding and allows users to scan multiple sites simultaneously. Since this is not an online scanner, it requires Python on the server on

```
computer:~/droopescan$ droopescan scan drupal -u http://example.org/ -t 32
