

Protect Yourself

In the previous chapter, we covered some basic website hacking techniques that hackers use to find vulnerabilities in a web application or web server. In this chapter, we will take a look at the different ways in which website owners and businesses can keep their websites safe from such online threats.

Over the last few years, there have been reports of various businesses websites and applications getting hacked – from Yahoo!, Uber, eBay to even government agency websites such as the UK's National Health Service (NHS). As more people start to go the digital way, the safety of the information has become essential. To combat the threat from hackers and reduce the risk of becoming a victim of an external hacking attack, it's essential that website owners and businesses start understanding the mindset of hackers.
