Create Synchronicity

Brief Description:

Create Synchronicity is an open source, portable application that is basically designed to back-up or synchronize files and folders for safety purposes. This application can be either installed on to your hard drive directly and launched without installing from the zip-kind of Archives. This application includes many high-level features such as multiple files synchronization at the same time, DST corrections, pre-planned inclusion or exclusion of files and folders along with

regular expressions for user support and needs. Some of the key features of Create Synchronicity are flexible options for bidirectional and unidirectional files syncing. This can even recognize some difficult paths like trials leading to USB drives and makes a backup for the files and folders from such paths too.

Why you must get it:

Create synchronicity is an easy, powerful, fast and safe backup application which is used to synchronise files and folders. The major reason why people prefer this application is because of its easy-to-use interface. It will allow automatic saves and backups if schedule-based saving is created for files and folders. This application comes in different languages and it doesn't fill up your hard
