

for synchronisation purposes. FreeFileSync has been designed to save your data and time. It sets or runs data backups with a good visual feedback. This application supports comparison of content by date and other factors like file size, copied files for large sync operations and creation of batch files for automated synchronisation.

Why you must get it:

FreeFileSync has myriad options which let the user sync files between two folders as well as two different locations. The key features for FreeFileSync include synchronising folders on local disks, Google Drive cloud storage, network shares, and mobile devices like android phones and tablet via MTP. This app also syncs files using FTP and *FTPS* transfer protocol. It detects moved and renamed files and folders as it keeps the path of each file in its history. The main feature of this app is comparing and synchronising multiple files parallelly. It even detects conflict and propagates deletion that may happen by accident in the future.
