rekonq**Brief Description:**

Rekonq was one of the browsers that replaced Kubuntu's default browser, Konqueror, one of the longtime KDE favourites. The interface of Rekonq is similar to Chrome and other common web browsers so the Web kit layout engine is laid at its core. The Web kit is actually derived from KHTML, the layout engine of Konqueror.

Why you must get it:

One of the major features of this web browser is the KDE integration. Most of the famous web browsers are integrated with Gnome's file picker thus making them slightly boring and lacking. KDE lets the user have the ability to view a website's source in the KDE text editor. This process saves the dialog with complete integration of the KDE file chooser. As a Web kit based browser, it comes with standard Web kit features like web inspector, JavaScript settings, and loading plugins. This browser has privacy setting like incognito browsing which hides data and never lets it be saved. Users can also clear the privately managed data and cookies. This browser not just allows multiple tabs but also lets you make a clone of the existing tab along by detaching them and making them into a new window.

FireFox**Brief Description:**

Firefox is one of the most famous internet browsers with great credibility. Many internet users prefer to use Mozilla Firefox browser because of its safety and quick-loading features which is unbeatable even by the top web browsers available. Firefox has unbeatable security advantages thus if a PC is installed with this software it usually doesn't get damaged by threats which are sent through web searches.

Why you must get it:

As a browser, Firefox is equipped to face several threats and malwares which will be faced because of web searches or while opening some less secure website. This app has enabled advanced security which blocks any kind of threats automatically. The users of Firefox browser don't find it difficult to use as the
