

virtual experience remains same from old days but it keeps updating the security levels in background. Another important feature is hidden or private browsing mode, this will enable the user to conduct a web search without keeping a record of what is being looked for. This browser allows multiple extensions to

be opened at the same time which is not possible across other web browsers. Mozilla allegedly doesn't send private data of user to its servers or any third party partners. This program also has features like tracking protection to make sure that websites don't track the users' online activities.

Chromium

Brief Description:

Chromium is one among the open-source project that underpins Google's Chrome browser. Since Chromium is open-source, many other web browsers including Chrome have been built from its source code. This browser is compatible with all the extensions of Chrome. This doesn't prevent the user from using third party extensions so the user can access many web pages that have blocked by other web browsers. This software doesn't allow proprietary software so even a normal user can use it without making any changes in it. Chromium tracks the details mentioned in the address bar or search engine by
