

Midori basically works on Linux-based platforms. This provides a completely anonymous and secure private navigation as developers feel like anonymity is an extremely important feature to have. This browser is developed using Web kit, GTK, and rewritten in Vala. Even though the development process of this browser was stalled for almost 2 years, yet it regained its old popularity and reputation.

### **Why you must get it:**

Most people think Midori might not support popular web pages as it a small and light web browser, but it provides higher protection while searching such popular websites as malware threats will be prone in the place where most users visit. This browser is fast and uses majority of the latest web technologies and provides an array of extensions with all essential features too. As this is open-source and available for free, anyone can modify and provide diverse feature sets. This browser handles all trending web technologies like HTML5 and CSS3 so users can play and watch whatever they like. The lightweight web kit ensures that the browser has rendering engine lends like all other browsers.

## **Qupzilla**

### **Brief Description:**

Qupzilla is an open-source browser for the personal computers which is available in both installable and portable versions. This runs on the same Webkit engine layout as other popular browsers, like Chrome, along with some noticeable similarities. The user interface is designed in such a way that anyone can easily understand how it works and get access information they need. The developer has designed this software to be lightweight and multi-platform that has taken the example of design and technical cues from Firefox and Chrome.

### **Why you must get it:**

The major advantage to choose this browser for a Windows or Linux system is its preinstalled features like Ad block, Download manager and more. Another reason why this browser is popular is its performance across multiple platforms. This software is built in flash-based drives, so it achieves great performance. This program allows an integrated RSS reader which enables the users to visit reading sites too. Another great feature that we noticed in Qupzilla is the speed dial extension which allows the users to save their favourite web pages on the opening page and access them easily. Qupzilla allows its users to have the option to adjust themes and interface settings as per their wish.
