

agement system allows the user to change its source code wherever they go. Other features of this web browser are using KHTML or KDE web kit as rendering engines. This browser allows different kind of plugins like service menus, Kparts, KIO, and KPart plugins. The file management is excellence since it uses most of the dolphin's technology features and allows embedded application previews for files.

Dooble Browser

Brief Description:

Dooble is a web browser which is designed with goal of attaining a comfortable and safe browsing medium for the user. This is also freeware and an open-source browser which allows anyone to change the code of this application and run in their system in a newer name too. Dooble is one of the web browsers which are not similar to famous web browsers like Chrome, Opera etc. This browser has few new ideas which basically focus on privacy and security rather than overwhelmingly features that are implemented to please the user's eyes. A built-in cookie which can be easily accessed from the menu bar and can be launched with a password request.

Why you must get it:

One of the primary features of Dooble web browser is to maintain privacy of its user's information and personal data. This has a fancy desktop option which doesn't go unnoticed easily. This also works as an integrated file manager. File Transfer Protocol is also included with this browser. This browser has other exclusive features like private browsing, content and ad blocking, authentication encryption, Debian package, FreeBSD, Linux, and Windows support. Password management is another major feature of this program.
