

between folders. Within a directory you can apply a file filter, so that only images are displayed whose filenames have a certain string or match a regular expression. Activating the cache allows for instant switching between images. A unique feature of Nomacs is the synchronisation of multiple instances. With this feature you can easily compare images by zooming and/or panning at the exactly same position or even by overlaying them with different opacity. Apart from these features, users can raise queries at the forum that has a ton of data about the operation of the app, contact the app developers directly or watch tutorials in order to learn from the basics, all available under one umbrella, including translation of Nomacs to other OS languages.
