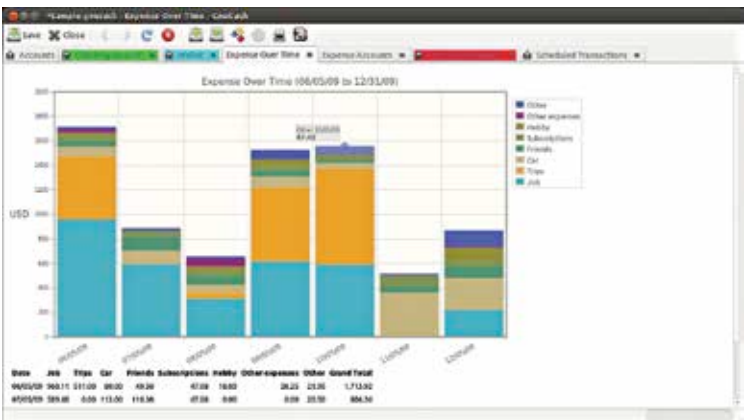
Brief Description:

GNUCash is a freeware and open-source accounting platform developed keeping small businesses and freelancers in mind. This accounting and budgeting tool can be downloaded and installed on different types of operating system without any sort of restrictions. The users experience a simple and clean graphical user interface which will allow full access to all the options featured excluding some in the software. This app is used to track expenses, income, bank accounts and many more.



Why you must get it:

The major features of GNUCash are its automatic file backups and recovery options. Every time a user works on this software, GNUCash makes a backup copy of the data even before the save option is clicked. So it collects multiple backup files which can used to retrieve data in case the system faces some problems. GNUCash collects log files to record the changes made in data in the executing sessions so it is possible to recover work in the event of power outrage or system crash. Another major feature of this software is financial reporting. This software is based on double entry accounting which helps maintain business financial books. For small businesses, this app helps in detecting depreciation rates, maintaining accounts receivables and payables, invoicing every bill payment, tracking of tax and payrolls.
