Claws Mail

Brief Description:

Claws Mail is a free email client which is a news and GTK+-based email client. It provides easy configuration and plenty of attributes. It runs on Solaris, Linux, BSD, Mac, and Windows. Its appearance and interface are developed in such a way that brand new users find it familiar and easy-to-use. Claws Mail

stores messages in MH format which allows for data security and quick access. You can easily import and export your emails from other email clients. Its extra plugins provide numerous functionalities such as laptop LED handling, calendar, and RSS aggregator. Other features are customised tool bars, theme support, external editor, foldable quotes, per-folder preferences, etc. There are other spam filters also can be used via the features called “Actions” and “Filtering.” You can either return the receipts or not based on your preference. You can give “Return Receipt” request by using the “Options/Request Return Receipt” in the Compose window. If you do not want to request Return Receipts, you have an option for that also.
