

Why You Must Get It:

The primary reason we recommend this software is that Claws Mail is very user friendly when compared to famous email clients such as Outlook, Mozilla or Thunderbird. Claws Mail is lightweight, so that it can be used in low-end systems/computers without using too much CPU or memory power.

29

Mutt

Brief Description:

Mutt is a great open-source email client which supports many mail storing formats. It sports additional features like threading capabilities and message scoring. Mutt depends on exterior tools for filtering and composing mails. Safety-conscious users frequently use this software. Main features of this software are DSN, POP3, IMAP, MIME, PGP/MIME, mail threading, color support, translation, etc. You can get the free version and open-source from the internet

30

Sylpheed

Brief description:

Sylpheed is one of the versatile email clients, based on Linux, Mac OS, and Windows. Its easy to use interface and host of useful features, makes it a unique software. Sylpheed allows you to organise your mails with preferable and supportable templates, virtual folders, and labels. With Sylpheed, you can access multiple POP, MH mailers, and IMAP accounts. It offers the user with flexible message templates for important or frequently sent mails. Its international language support makes it a globally usable and adaptable software. All of its server connections support TLS/SSL security and the mails are encrypted with PGP. The Bogofilter integration in Sylpheed provides easy and safe spam filtration. Sylpheed searcher provides you with fast and efficient database-driver for text search from all the mails. This software has X-Face feature, which allows user to view the face behind the mail and displays HTML mails with plain texts. It also has a message editor for mail editing and allows you to use external editors too.
