

rate with your team, send conferences and meeting invitations. Since all the contacts are stored in Zimbra you can find if the a particular user is currently online. Since it is open-source, you can save a significant amount in your expense. The unique feature about Zimbra is that you can work with any device and synchronise between your devices so that you can work from anywhere seamlessly. You can attach large files upto 25MB in your emails, which is not available with most of the email application providers. The search option in Zimbra is very effective and it allows you can get the desired content easily. It offers multilanguage support and since it is open-source you can add plug-ins to input more languages into the application.

Geary

Brief Description:

Geary, a new IMAP email client application with a low-key interface design, offers a fast and responsive service. It supports Gmail, Yahoo Mail, Outlook.com, and popular IMAP servers. It provides just email but does the job very well in the competitive area. It is a fast and flexible application for Gmail users. All the email messages are stored in one file and hence by copying one file you can transfer the offline mail content to a different PC. It isn't very customisable but it's handy with the available options.

Why you must get it:

With a modern and straight forward interface, setting up Geary is so simple that you can complete it in just three steps. Unlike other applications, using Geary is very easy with only three side panels. It also synchronises with your Gmail labels so that your emails aren't mixed up. Desktop notifications when a mail received in the inbox are an additional feature of Geary.

SeaMonkey

Brief Description:

SeaMonkey provides an all-in-one email suite with a powerful, fully-featured email client along with a great browser, news client and an HTML editor. It is an application that supports high security and privacy with an effective spam filtering method. This is an open-source application built by large community of contributors. Various programmers have contributed to increase the features of SeaMonkey which has introduced several add-ons. The program runs on a very less storage of less than 100 MB and is not resource hungry.
