Airtable

Brief Description:

Airtable is a type of project management application which is based on the cloud. It targets small to midsize businesses which even includes individual departments inside larger companies. This kind of process is fully focused on data collaborations and the organizations.

Airtable uses the spread sheet format in order to organize data. Data that are related can be linked together. For instance, a person can link contacts with a company or you can even link the inventory items with their vendors.

Why you must get it:

This is a must-have software because it is adaptable on multiple devices. Users can see data in the format of spreadsheet, where the data can be viewed as tappable cards on the mobile devices. Users can add and remove data, share tables and attach files on both of the devices.

Airtable has services like Google drive, Dropbox and Evernote. The tables created in this software can be shared, and the users have a choice to track a
