

person who is making some changes to the documents when required. Users can chat with each other during working hours on the tables itself. This software is also available as a mobile app for iOS.

## **MyCollab**

### **Brief Description:**

In today's business-oriented world, project management software play a vital role. There are so many open-source project management software. Among those, MyCollab software holds a unique place. This can be used widely right from small businesses to medium ones. By using MyCollab, you can track all your projects in one place. This can be downloaded and used on both desktop/laptop and mobiles. This can be used in all the modern browsers such as Firefox, Safari, Opera, Chrome, etc.

### **Why You Must Get It:**

If we have to mention the features and benefits of MyCollab, then the list will go on for ages. It has numerous features and provides lots of benefits to the users. Document management, project management, and CRM are some of the features of this software. It can be used efficiently in both the methodologies of agile and traditional project management. Other important features are user management, online editor, agile project management, reporting, calendar, file management, customer management, issue tracking, task management, and last but not the least project management. Most of the famous companies and organizations use this software to manage their projects. Companies like Cognizant, FAP, Imagine IT, etc are known to use this software. Another main advantage is that all the data is supposedly secure and the confidentiality is constantly maintained.
