CamStudio**Brief Description:**

CamStudio is a software where you can record the desktop screen. it is mostly used for saving the screen activity into an AVI file, with the help of an option that automatically converts into SWF format as soon as the recording process has finished.

Why you must get it:

CamStudio is very compact and has a good features. It even shows you the area of the screen which is recording. It has an option where you can highlight the path of the cursor while recording. You can capture the screenshots by setting the rate of the frame, tap on the coordinates and can drag the mouse around the area for capturing. It even has an automatic panning, and sound recording too. It is easy to convert any AVI files into MP4's as well. It can be advantageous for producing the both instructional videos as well as the screen captures and you will even be able to share them with others.

Camstudio will help you record the whole screen or a particular portion with sound option. It has an ability to add the comments to both the video and the screenshots. This software has a good selection of video styling features that can be enjoyed as well.
