

from the line of command. But, the developers are taking care of its graphical interface. One of the greatest advantages is that the user will be able to encode the video and the audio with the help of Ogg container. The image can be encoded in vorbis and the theora sound. The program is smart enough, where it can record only some part of the screen, that has been changed with the fact of reducing the computer resources consumption. This software also allows recording the audio through ALSA, JACK audio server, or the OSS. This software has three important types of programmes - the command line tool with the gtk-recordmydesktop, QT environments and the qt-recordmydesktop as a graphical front ends for the GTK.
