Armadito

Brief Description:

Armadito is an antivirus software that protects your systems and the servers from any kind of malware and the viruses. This software is available for both the Windows as well as Linux. It has been composed with some web-based central administration of the console. It can also be used remotely from anywhere with an intuitive interface, and gives users free access to most of the features.

Why you must get it:

Armadito is user-friendly, quick, simple, and effective. With the help of HTML5, CSS3 technology, Angular Js is easy to manage. It also aims to be a multiplatform for the MacOS X, Linux, and Windows. The integration in this software made very simple on the GLPI solution, as the Armadito antivirus is an integral solution for the GLP software or an open-source IT of the system.
