

have been compressed with UPX, FSG, NsPack, Petite, MEW, Upack etc. Other than this, it also supports word documents like HTML, RTF or Rich Text Format, PDF (Portable Document Format), and Microsoft.

ClamWin

Brief Description:

ClamWin is a free antivirus solution for systems. It is an open-source free software that integrates using Windows explorer and Microsoft Outlook. It schedule scans, and can automatically update the definitions of the definitions. It will also offer good basic protection without upgrading to its paid antivirus packages. It automatically updates the database of the virus while detecting the connections to the internet. Though it is a basic version, it is very effective too. There will be a small balloon tip that will appear on the taskbar icon which indicates the status of completion of the process of updating. It will try to establish connection with the help of a server when it fails to download any updates for the first time.

Why you must get it:

ClamWin has some free tools that provide some basic functionalities. Some features of ClamWin are the schedule scanning, removing the virus that are infected in the attachments automatically, it also regularly downloads the updated database of the virus. The ClamWin has a portable version where this can be used with the help of USB flash drive.
