Zabbix

Brief Description:

Zabbix is a kind of network monitoring software for a IT infrastructure, services, resources, and applications. It is a free software which has been crafted to monitor millions of metrics that have been gathered from multiple network of devices, servers or virtual machines. The platforms will allow users to collect and analyse the performance of the metrics and statistics, in order to visualise them and get notifications regarding pressing issues in the present. It can be utilised in small businesses or with large businesses with more number of monitored devices.

Why you must get it:

Zabbix is affordable and powerful and has been used by business people in all sectors. It will let users have the freedom that comes from using open-source software since they can access the code of the source easily without assistance from the vendor.

It supports automated actions and proactive notifications. It also offers broad communication of flow which includes sending the notification and the escalations of the information to the personnel responsible. This permits quick acknowledgement of the information that is received. It has the ability to automatically take actions when necessary.
