

Why you must get it:

The Django is one of the first frameworks that respond to the new exposure. It is the core team that usually alerts the other frameworks of the patches. There are lots of features in Django. It has more than enough packages and can be utilized for many things. It even has a wonderful documentations that will work very quickly. It is a must to be concerned about the quality of documentations. It has the best practices for SEO too. While using this software, the SEO team

will be very grateful. Django is great to start with and it has enough scaling too. The Django framework will advocate the uses of the human- readable websites or URLs that will help in the search engines.

OpenCMS

Brief Description:

OpenCMS is a professional-level, open-source website for content management solutions or CMS. It has been written in the Java script. The Alkacon software under the license of LGPL has distributed OpenCMS. This software needs a container of ISP Servlet like the Apache Tomcat.

OpenCMS is an application which is based on the working environment, workflow management, user management, WYSIWYG editor, content versioning, internalisation supports and many other features that include the proxying of the request to another endpoint.
