

Why you must get it:

OpenCms is a software that is installed on the web of the server, where the content manager can access the system from any location with the help of their web browsing. It is fully based on the browser. It has good security with strong encryption, like HTTP protocols for the process of login, if it is required. In simple words, it is an independent platform. Apart from this it helps reduce

the cost of the IT in such a way that it cuts the costs of the licensing as well as the total cost of the ownership. It is based on the standard technology of the Java. With the help of the current shift to open-source operating systems like LINUX, moving to open-source applications is one of the best step that has been taken. **[1]**
