

and businesses can alter and modify the software's functionalities to suit their own needs and requirements.

In this Fast Track, we attempt to bring you some of the best open-source software and applications that work across a wide array of platforms like Windows, Linux, MAC OS and more. Most of these apps or software are free, while some are freemium and a few are paid. We have created a comprehensive list of open-source software across various domains like photo editing, anti-virus, customer relationship management, bug tracking, games, data recovery and a lot more. You can also discover viable alternatives to popular apps like Gmail, Photoshop, Premiere Pro and others by reading through our list of open-source software. After reading this list, we're sure that you will not have to pay for software ever again, since most of the software and applications in this list, work as well, or better, than their paid counterparts across all the mentioned domains.
